

# Appendix B: Additional Analyses

## Police Fleet Analysis

Because UA’s police department has guidelines regarding daily fueling, we were able to conduct additional analysis regarding the police fleet. This chart shows the number of police vehicles that received fuel on a single day throughout the year. This is the type of analysis that could be performed city-wide if the City had daily utilization data for all vehicles. Daily utilization can be one metric used to properly gauge appropriate fleet size. In the case of marked cruisers, daily use was inconclusive by itself because UA’s number of cruisers per officer is similar to that of its peer cities.

Marked Police Utilization
